## Description

The Radiography Program is offered through a partnership between Bay College and the Michigan Workforce Training and Education Collaborative (MWTEC). Educational Programs in Collaboration (EpiC) consortium for the purpose of sharing instructional resources to offer healthcare program. Each college enrolls students in the program under the college's admission criteria and each awards the degree according to that college's requirements.

The curriculum is formulated on the principle that the student radiographer's education should blend knowledge and skills derived from a program of studies including the humanities, natural sciences, mathematics, social sciences, computer sciences, health principles, and communication skills with radiography principles in developing the skills needed to enter the field as a beginning practitioner. As a member of the patient-oriented team of health occupation specialists, the radiographer utilizes basic knowledge and skills to contribute to patient care in the provision of diagnostic services as indicated by patient needs.

All EpiC Consortium Radiography program partners are accredited by the Higher Learning Commission. Upon completion of the program, the students will complete the ARRT Radiography Certification exam ([www.arrt.org](http://www.arrt.org)).

## Requirements for Radiography Program

Prior to entrance into the program, the Bay College Department of Allied Health requires students to successfully pass the following; criminal background check, a drug test, American Heart Association BLS for the Healthcare Provider, and the Certificate of Physical Fitness Form completed by your physician. Along with the Certification of Fitness, students must also have proof they are immunized for specific contagious diseases. Facilities may have additional requirements, which a student will also need to meet and is communicated to students by the department. The program requires specific technology requirements that may require the purchase of a specific computer that will run the required simulation software.
